DryGuard Plus
The One Coverall Best Suited for Wet Applications

DryGuard Plus Facts and Features

- UniTech’s new and enhanced disposable coverall
- An integral part of UniTech’s Hybrid Protective Clothing Program
- 83 GSM microporous film laminate
- Ultrasonic seams
- Features storm flap, hood and elastic wrists and ankles
- Yellow

Hybrid Protective Clothing Program
The Advantages of Launderable and One-Time Use... Combined

Improve Worker Protection and Reduce Personal Contamination Events

UniTech’s Hybrid Clothing Program employs a combination of single-use protective clothing OVER the ProTech Plus garments for applications where there may be high contamination or wet environments. This innovative approach to protective wear results in the perfect combination of protection/comfort and cost minimization.

Why does the combination of launderable and supplementary one-time-use garments for special applications work well?

ProTech Plus is the industry’s most cost-effective and comfortable base garment. It provides protection, comfort (including minimized heat stress), durability, low cost-per-use, and a long useful life.

The choices for one-time use garments to be worn over ProTech Plus for special applications depend on your tasks and preferences:

High Contamination Applications

- SoftTech Plus is constructed from SMS material that offers additional protection from radioactive contamination, chemical hazards, and a cost-effective way to keep contamination out of your reusable garments.
- DsovTech Plus is constructed from spun polyvinyl alcohol material and offers a good balance between strength and comfort. It can be disposed of by dissolving in water over 190 degrees. It may not perform well in wet environments and is higher cost-per-use than other options.

Wet Applications

- DryGuard Plus is made with a microporous film laminate that offers exceptional barrier and splash protection. Seams are triple sealed (sewn, sealed and taped) to provide added strength and extra protection in wet environments. It offers superior protection from wet contaminants as well as sweat-through in high-heat environments. A good combination of comfort, cost and protection as a second layer of protective clothing.
